PROFILE

Passionate and detail-oriented software developer with a systematic approach to problem-solving and ability to work in a team environment. I am seeking to advance my career as a software developer where I can contribute my experience, education, and leadership.

EMPLOYMENT HISTORY

Software Developer, Van Doren Sales   Yakima
Jan 2019 — Present

While working at Van Doren Sales, I have had the opportunity to create several applications from the ground up. This has included progressive web apps and desktop apps with Electron, both utilizing React for the front-end. I have also taken over projects from previous engineers. During my time here, I have learned to adapt quickly to the constantly changing requirements of our customer's apps, as well as the need to use different languages/frameworks for different projects.

Web Development Instructor, Nucamp   Remote
Dec 2019 — Feb 2020

While being an instructor for Nucamp, I have had the opportunity to teach and mentor my students in ES6, React, Redux, and various React libraries. I would meet with individual students during the week when they needed help or did not understand something and would explain it in a way that they could understand. Every Saturday I would give an online workshop that totaled 4 hours, covering topics they learned the prior week as well as having them work through a group project.

Customer Service Representative, The Home Depot   Yakima
Apr 2016 — Jan 2019

As a customer service representative, I processed purchases, returns and exchanges, created customer orders and set up delivery of product from the store to the customer, called customers when their ship-to-store orders arrived, answered incoming phone calls, and provided accurate information about products and services that the company offered.

EDUCATION

Full Stack Software Development, Woz U
Jan 2018 — Sep 2018

While attending Woz U, I learned the fundamentals of full stack software development utilizing JavaScript. By the end of the course I had gained a solid understanding of both front-end and back-end JavaScript, ReactJS, MongoDB and MySQL, cloud deployment, and the agile methodology.
